Our high quality 12v to 500v high voltage inverter is not only cheap price, but also durable. Our factory provides customized services, and we also have a quotation.

Making a custom PCB will be more compact and have a much better appearance. This circuit only takes up 1 5/8" x 1 1/4" x 1" and can operate from 8.4V to 31.2V and output maximum of 500V ...

Features: The module can output high voltage pulse current, small size and high efficiency. This module is the finished module of transformer for small scientific production.

Small production: This module is a science of small production with high voltage inverter transformer / booster finished module.

After the input terminal DC6V-12V voltage can get tens of thousands of volts of direct current high voltage at the output. It can be used for high school science experiment, electronic equipment, ...

These devices convert low voltage DC input into extremely high output voltages, useful in experiments, ignition systems, and specialized applications. The table below ...

A 12V to 500V boost converter can be used to step up the voltage from the low-level output of solar panels or wind turbines to a higher level that is suitable for charging batteries or ...

The higher voltage supplies large loads such as traction motor, air-conditioning, and starters. Lower-power components such as infotainment and safety systems will remain on 12V supplies.
