As solar PV deployment ramps up across the EU, it's not just about harnessing clean energy - it's also about powering job growth. The expansion of solar installations creates a ripple effect, ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

While outright comparisons of solar capacity can be skewed by population size, evaluating solar PV capacity per capita provides a clearer picture of each country's solar ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind ...

This section reviews Europe's actual electricity generation in 2024 and the influence of climate conditions on potential power generation from onshore wind and solar photovoltaic (PV), as ...

Solar energy, the fastest-growing energy source in the EU, saw an 82% cost reduction between 2010 and 2020. Solar capacity expanded from 164.19 GW in 2021 to an estimated 259.99 GW ...

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 82% between 2010-2020, making it the most competitive source of ...

This is according to the half-yearly data on public net electricity generation presented today by the Fraunhofer Institute for Solar Energy Systems ISE. The evaluation is based on ...
