-----

Use these free STEM projects, lessons, and activities to help students get hands-on exploring and learning about solar system science. The Earth, the Moon, the Sun, and ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own ...

The sizes of the planets in our Solar System and the distances between them can be hard to grasp, but this experiment will help you put ...

Since the 1950s, NASA has harnessed the energy of the Sun to power spacecraft and drive scientific discovery across our solar system. Today, NASA continues to advance ...

Learn about the distances between planets and the Sun with a solar system for your pocket. The purpose of this activity is to challenge simple models we have of the universe.

Solar power is now available to anyone, at modest cost and provides payback benefits for years. Also it provides independence because the home owner or apartment dweller can set up a ...

We will explore practical ways to incorporate solar energy into daily routines, from solar-powered lighting to solar cooking solutions. By understanding these applications, we can ...

The sizes of the planets in our Solar System and the distances between them can be hard to grasp, but this experiment will help you put things into perspective.
