What is Communications in Barbados?

Communications in Barbados refer to the telephony, internet, postal, radio, and television systems of Barbados. Barbados has long been an informational and communications centre in the Caribbean region. The telephony, internet, and postal systems have good and reliable electricity coverage throughout Barbados.

When did telecommunications start in Barbados?

In 1942, the international telegraph service relied mainly on submarine cables for its operation. However, in 1943, there was the installation of the wireless stations at Boarded Hall and Carrington when Barbados became a major player in global telecommunications.

How did Barbados communicate?

People in Barbados had various forms of communication as early as the 1840s. Some of the earliest expressions of inter-island communication included a number of signal stations built along the high points of the island to relay messages towards the Saint Ann's Garrison on the south-west coast. This method was used to transmit acts of transgression towards the island.

When was the first telephone network developed in Barbados?

The first telephone network in Barbados was developed in 1884. Barbados played an important role as a crucial link in the trans-Atlantic communications network as part of the former British Empire's All Red Line, which came into existence during the early 1900s.
