This transformation enables flexible resources such as distributed generations, energy storage devices, reactive power compensation devices, and interconnection lines to ...

The Commission is evaluating how the framework for security of gas and electricity supply worked in the past, in particular during the energy crisis, by the means of a fitness check.

Thanks to this online tool, you can monitor our country's electricity supply situation for the next seven days at any time. It is updated daily and uses different colour codes depending on the ...

The project also features a powersync distribution cabinet, enabling flexible switching between the grid, energy storage, and loads. It offers functions such as peak ...

Brussels, a hub for sustainable innovation, is increasingly adopting mobile energy storage power supply vehicles to support its renewable energy goals. These vehicles act as &quot;batteries on ...

In response to Russia's use of energy as a weapon, the EU countries agreed in October 2022 on an emergency intervention to reduce energy bills for European households and businesses.

Either way, this article unpacks the Brussels energy storage battery model, a game-changer for cities aiming to ditch fossil fuels. Spoiler: It involves more than just fancy waffle-shaped batteries.

Currently, Europe has around 85 gigawatts of energy storage systems in operation, a figure that needs to more than double to meet the EU's renewable energy targets ...
