How does European energy use battery storage?

European Energy works actively to implement battery storage in our renewable energy projects. Our battery storage projects are primarily co-located, meaning a regular renewable energy park is combined with batteries on the same plot, sharing the same grid connection.

What is the battery storage Europe platform?

The Battery Storage Europe Platform brings together industry leaders representing the battery storage value chain to advance the business case and regulatory frameworks for battery storage across the EU. Together, we urge a tenfold increase in battery storage by 2030 to ensure Europe's energy transition, security, and competitiveness.

Which country has the largest battery storage market in Europe?

Germany, Italy and the United Kingdom continue to lead the European battery storage market in 2025 and together account for almost 70 percent of newly installed annual capacity. Germany holds the largest market share with 27 percent, followed by Italy with 17 percent and the UK with 11 percent.

What will Europe's battery storage capacity look like in 2025?

Forecasts for 2025-2029 Battery storage capacity in Europe is expected to expand significantly in 2025. Newly installed capacity is set to increase to 29.7 GWh - a rise of 36 percent compared to 2024. Market shares, in turn, are shifting significantly.

As global electricity costs fluctuate and governments push for clean energy transitions, homeowners and businesses are seeking reliable, efficient, and tailored battery storage solutions.

This annual report analyzes developments in the European battery storage market and provides in-depth insights into key applications such as large-scale storage systems, ...
