---

The overall increase in renewable energy generation is seen as a positive development for the country, displacing more costly fossil fuel ...

The growth of solar and wind energy in El Salvador is anticipated to have a substantial positive impact on the country's economy. By reducing reliance on imported fossil ...

This report summarises IRENA analysis to identify favourable zones in El Salvador for utility-scale solar PV and onshore wind projects, and their associated techno-economic parameters.

This plant, projected to begin operations in 2026, will position AES El Salvador as one of the companies with the highest installed solar generation capacity in the country. The ...

The new solar plant will benefit more than 2 million users across the national power grid and is expected to reduce approximately 20,000 tons of CO2 emissions per year, ...

Discover how new solar and wind projects are transforming El Salvador's energy landscape, reducing fossil fuel dependency and boosting renewable capacity by 2025.

AES' Meanguera del Golfo solar plant--the first of its kind in Latin America--relies on enhanced solar-plus-battery storage technology to deliver uninterrupted, carbon-free electricity to ...

As countries around the world shift towards renewable energy sources, El Salvador is gradually increasing its solar and wind energy capacity. While the progress is ...
