Funding to help preserve the existing nuclear fleet at risk of retirement due to economic factors, which can provide carbon-free power to data centers.

In Italy, data center operator Data4 signed a 10-year deal with utility Edison Energia to buy power from a 148-megawatt solar farm northwest of Rome. As tech companies ...

Solar power presents a compelling solution for data centers and IT infrastructure, offering benefits like reduced carbon footprint, cost savings, and energy independence.

Learn about the complexities of financing data centers and explore various funding strategies to align with long-term goals in a rapidly evolving market.

Many data centers feature large amounts of plant equipment, such as chillers and generators, on the roof, meaning there is simply not enough space to justify a solar deployment.

In September, we closed a transaction where we did exactly that: financed multiple build-outs of single-digit-megawatt data centers across nine locations in the southeastern ...

As the consumption of power and water by these data centers collides with efforts to address climate change and the desire of investors and lenders to invest in green and sustainable ...

This article provides a detailed overview of financing data center construction, offering insights to help you navigate the complexities and make informed decisions.
