1. How will the evolving regulatory landscape and government incentives in Germany influence the deployment and commercialization of advanced electrochemical ...

Since the power being fed from photovoltaic systems and wind turbines actually depends on the environmental conditions and not the current demand, storage facilities - in addition to a ...

The Institute Electrochemical Energy Storage focuses on fundamental aspects of novel battery concepts like sulfur cathodes and lithiated silicon ...

In the Electrochemical Energy Technology department, electrochemical reactors and storage systems play a key role in shaping our future with ...

In the Electrochemical Energy Technology department, electrochemical reactors and storage systems play a key role in shaping our future with renewable energy from the sun and wind. ...

Our offering extends along the entire value chain from the development of battery technologies (Li-Ion: solid state, LiS, LiO₂, Na-ion, redox flow), materials and components, cell design, ...

In energy storage, we are researching both thermal and electrochemical technologies: For sensible thermal energy storage, we develop innovative storage vessels and concepts as well ...

Fraunhofer FEP applies high-rate roll-to-roll coating and evaporation processes for the development of novel Li-ion and thin-film batteries.
