-----

The company has been contributing its flow battery to a green hydrogen project in Orkney, Scotland, that leverages tidal energy, hosted by the European Marine Energy Centre.

As the demand for battery-based energy storage grows, finding alternatives to these metal-based solutions is essential for advancing the green energy transition.

A green battery innovation transforms industrial waste into ...

This marks the first time a waste molecule -- specifically, triphenylphosphine oxide (TPPO) -- has been used to power a redox flow battery. "Battery research has traditionally ...

As the demand for battery-based energy storage grows, finding alternatives to these metal-based solutions is essential for ...

Flow batteries are emerging as a transformative technology for large-scale energy storage, offering scalability and long-duration storage ...

A green Eu-Ce acidic aqueous liquid flow battery with high voltage and non-toxic characteristics is presented.

Researchers have created next-gen, high-performance organic flow batteries that are cheaper than lithium-ion systems.
