How much solar power do you need for a camper battery?

A 300 amp-hour camper battery, for instance, would need around 300 watts of solar power. Also keep in mind that solar panels experience a 75-90% drop in efficiency on cloudy days, so it's good to have slightly more than you need when it comes to solar power (about a 20% cushion, if possible, to account for less-than-ideal conditions).

How much power does an RV use?

Complete Power Consumption Guide for RV Owners (2025) Air conditioning dominates power consumption: Running AC can increase daily electricity usage by 150-300%, making it the single largest factor in RV power bills. A typical 15,000 BTU unit running 8 hours consumes 12-28 kWh alone.

How do I size my campervan or RV solar setup?

Use this solar calculator to size your campervan or RV camper solar setup. If your device doesn't specify watts, use the watt calculator to convert amps and volts. List each device - every electrical component - its usage in watts, maximum number of hours used each day & if it's an AC or DC model.

How do I calculate my RV solar power needs?

The first step to calculate your RV solar power needs is to sit down and in your head, go through an average day. Think about all the electric-powered things you use, and make a list. A spreadsheet would be a good place to make this list because it will be easy to add up the total and handy to reference later.

Discover exact RV power consumption by type, size, and appliance. Includes real usage data, cost calculator, and power management tips. Updated 2025.

By matching your electricity use (in watt-hours) to your solar panels and batteries, you can camp off-grid confidently -- no hookups, no ...

Step-by-step guide to help you calculate how much solar you need for your RV without needing to use an RV solar calculator.

Once you know how much power is actually left in your RV (either by checking the voltmeter or by reading the battery monitoring system), you can use this information to ...

As RVers who mostly stay at campgrounds, we haven't needed a massive solar power system--yet. But our
