A typical home solar panel is about 3 feet wide by 5.5 feet long, occupying an area of roughly 17.5 square feet (sq ft). On average, the amount of required roof space for a set of ...

A typical home solar panel is about 3 feet wide by 5.5 feet long, occupying an area of roughly 17.5 square feet (sq ft). On average, ...

This calculator is essential for homeowners, architects, and solar installers who need to plan and optimize the installation of solar ...

Determine the precise roof space needed for solar panels by matching your household energy demands to the practical limitations of your roof layout.

Enter a state, county, city, or zip code to see a solar estimate for the area, based on the amount of usable sunlight and roof space.

Learn how much space a solar panel system needs based on energy use, panel efficiency, and roof size to maximize savings and performance.

Each panel has an area of about 1.6-1.8 square meters, thereby implying that the area required for 1kW solar panel amounts to nearly 80-100 square feet for a 1-kW solar system.

Use our free rooftop area calculator to estimate how much space you have for solar panels. Enter your length & width to get kW capacity and space availability.
