How do I set up the outdoor wireless access point?

Setting up the EAP Outdoor wireless access point is quick. Plug one end of the network cable into the Outdoor EAP and plug the other end into the PoE port on the included PoE injector. Finally, prepare another network cable to connect the network port of the PoE injector to your home gateway.

How do I get a backyard WiFi connection?

The most obvious solution to a backyard Wifi is adding up an EAP or CPE. An EAP comes with two 360° omni-directional antennas which can cover 100 meters (300 feet) radius outdoor area. The CPE access point has more focused wireless beam width and better sensitivity for the wireless connection.

What is an outdoor wireless access point?

The EAP Outdoor wireless access points are part of the Omada SDN business network. With Omada, you can control the indoor and outdoor network with the same Omada SDN controller. Or use the Omada outdoor EAP as a standalone wireless access point without a controller. Two available models:

How do I extend radio signals with outdoor EAP access points?

Extending radio signals with outdoor EAP access points is different from the outdoor CPE. The only outdoor EAP that supports the wireless extender feature is the EAP225-Outdoor. To extend the radio signal, you will set up a wireless mesh network.

Creating an outdoor Wi-Fi antenna is an effective way to extend the range and coverage of your wireless network. By following the steps outlined in this article, you can build ...

Detailed walk-through, planning, and high res wiring guides to build a fast, reliable UniFi Wi-Fi Meshing Network for small-medium sized homesteads.
