How do you charge an RV battery?

An RV's battery is charged when connected to a 120v electrical outlet (like a shore power pedestal at a campground), an onboard or external generator, the motorhome or tow vehicles alternator, solar power, or even wind power. Let's break these down in more detail and learn how to use each method to charge your RV's batteries.

Do RV batteries need a proper charge cycle?

Proper Charge Cycle Is Used: The proper charge cycle for the RV's house battery bank must be used, especially if they're Lithium. Those require a different charging profile than flooded lead-acid batteries do, which requires the system to be set up correctly for the different battery types.

How do you charge RV batteries with shore power?

Related: Charging RV batteries with shore power is an automatic process. Simply plug the RV's power cord into a 120v AC electrical outlet, and the batteries will start charging, if needed, through your RV's power converter/charger. This converter converts the AC power to DC power so your batteries can charge properly.

Should I Charge my RV House Battery from a vehicle?

Depending on the conditions. Charging RV house battery from a vehicle is the last viable and least safe option to consider and should only be done if you are in a pinch and have no better means to recharge your RV battery. You will need to have the engine running on your motorhome, pickup truck, or another type of tow vehicle.

Learn how to charge RV batteries safely and efficiently--whether lead-acid or lithium. Includes shore, solar, alternator, and cold-weather charging tips.
