OverviewHistoryConceptPropertiesComparison to other technologiesApplicationsA lithium-ion capacitor (LIC or LiC) is a hybrid type of capacitor classified as a type of supercapacitor. It is called a hybrid because the anode is the same as those used in lithium-ion batteries and the cathode is the same as those used in supercapacitors. Activated carbon is typically used as the cathode. The anode of the LIC consists of carbon material which is often pre-doped with lithium ions. ...

The (LIC) or (LIHC) is fast evolving as the missing link between the Electric Double Layer Capacitor (EDLC) and the Lithium Ion Battery (LIB), being a distinct hybrid of the two ...

Hybrid supercapacitors (HSCs) integrate battery-type materials and capacitive materials into the same electrode by means of internal parallel, which greatly improve the ...

Research demonstrates the energy-efficiency benefits of hybrid power systems combining supercapacitors and lithium-ion ...

A Hybrid Super Capacitor (HSC) is a capacitor that uses a carbon-based material capable of absorbing lithium ions as the negative electrode material, and improves energy density by ...

Hybrid supercapacitor is a special kind of asymmetric supercapacitor, combining a lithium/sodium ion battery-type anode and a capacitor-type cathode in organic electrolytes.

A lithium-ion capacitor (LIC or LiC) is a hybrid type of capacitor classified as a type of supercapacitor. It is called a hybrid because the anode is the same as those used in lithium ...

Lithium-ion capacitors (LICs) consist of a capacitor-type cathode and a lithium-ion battery-type anode, incorporating the merits of both components. Well-known for their high ...
