One method used for this purpose is limiting the export power: The inverter dynamically adjusts the PV power production in order to ensure that export power to the grid does not exceed a ...

Installers can limit the inverter output to meet some special requirements. For example, many Australian homes are not allowed to export more than 5 kW to the grid.

Specifies the output upper threshold for the maximum active power to adapt to different market requirements.

The inverter uses a feedback voltage regulation, so I measure around 230V AC over all allowed input voltages. If 16V are exceeded, the unit beeps and switches off due to ...
