Myanmar investigates the different oil stockpiling methods, appropriate oil stockpiling amounts, and the cost and benefit of and/or from the oil stockpiling system.

He urged officials to soonest implement the operation of oil refineries which can contribute to meeting the domestic energy demand ...

Myanmar is today primarily a natural gas producer. As of 2015, Myanmar exports gas to Thailand and China. Myanmar had proven gas reserves of 10 trillion cubic feet in 2012, with an annual production capacity of 416 BcF. Oil reserves in 2013 numbered at 50 million barrels, with a production capacity of 21,000 bbl/d. The Yenangyaung oil field continues to be in operation. The country has classified 51 onshore blocks and 53 offshore blocks, including 26 deep water bl...

The advanced system is designed to function autonomously, without dependence on the power grid or generators, delivering a reliable ...

Plans to modernize refinery facilities and develop natural gas distribution for power generation and industrial use are in progress, reflecting Myanmar's evolving energy landscape and ...

On this vital energy "lifeline" running through China and Myanmar, Sigenergy is providing continuous green power for natural gas transmission with unmatched performance ...

The refinery, currently under construction, is expected to begin production by the end of 2025. The ministry also announced plans to complete a second, larger refinery with a 3 ...

Efforts are underway to decarbonise sectors like transport that rely heavily on oil, but this is challenging in areas such as aviation where alternatives (e.g. electric power) still cannot match ...
