-----

A pilot project in Bern, Switzerland will aim to store waste heat from a waste incineration plant underground. This stored heat can then be used in extracted in the winter.

Energy storage systems are revolutionizing how we manage renewable power, and the Bern energy storage project stands at the forefront of this transformation. With a focus on scalability ...

Energie Wasser Bern (ewb) is planning an innovative energy centre in the west of Bern. In summer, surplus heat from waste incineration at the EZ Forsthaus plant will be stored ...

We research electricity storage solutions for mobility and the supply of power. Our goal is the integration of renewable energies and the replacement of fossil fuels.

That's essentially what the Berne Integrated Energy Storage Project aims to achieve - but instead of chewing through AA batteries like your TV remote, we're talking about ...

Discover how Bern's innovative energy storage initiatives are addressing grid stability challenges while creating opportunities for international collaboration in renewable energy solutions.

As one of the largest battery technology research platforms available to industrial R& D projects in Switzerland, the overall aim of ESReC is to develop knowledge and technologies essential for ...

As a result, further development of the project as a heat storage site has been put on hold. The exploration campaign focused on one specific sandstone unit in the USM sequence (Layer 6c) ...
