What challenges does the Nordic power sector face?

The Nordic power sector, a global clean energy leader, faces new challenges as it enters the next phase of energy transition. Discover how the region is navigating rising electricity demand, complex risks and emerging technologies while striving to meet ambitious climate goals and ensure energy security.

What is the future of Energy Management in Nordic countries?

Smart grids and digitalisation: The four Nordic countries have smart meter penetration exceeding 90%, enabling more efficient energy management and consumer integration. Virtual power plants (VPPs) are emerging to aggregate flexible loads such as EVs, heat pumps and industrial assets into dispatchable blocks, enhancing grid management.

Why is Nordic energy important?

Special focus is placed on ensuring high security of energy supply for Nordic consumers and businesses, an enhanced Nordic position of strength for the energy transition and innovation, the development of an even more efficient and innovative Nordic energy market, and a stronger Nordic Region within international energy collaborations.

Will the Nordics have a fully decarbonised electricity system by 2030?

The Nordics are expected to have a fully decarbonised electricity system by 2030. However, the energy transition is entering a new phase due to the penetration of renewables, price volatility and the increased need for flexibility and storage. Also, electrification is no longer limited to light-duty transport or residential heat pumps.

However, the energy transition is entering a new phase due to the penetration of renewables, price volatility and the increased need for flexibility and storage.

These results underscore the Nordic countries' capacity to support the EU's renewable energy targets, with wind power being pivotal.

The energy policy co-operation programme sets out the political priorities and objectives for Nordic energy co-operation in the ...

It's about grid readiness and connectivity, plus energy storage, to ensure the green energy we generate is seamlessly and cost-effectively made available to the places and ...

# Nordic new energy supporting energy storage policy

The Nordic region benefits from large hydro reservoirs that provide excellent and cost-effective energy storage options, which are already being efficiently utilised.

“Think of supercapacitors as the sprinters of energy storage,” says Dr. Lena Fjellström, project lead at Nordic Energy Research. “They’re not here to replace marathon ...

As the Nordic countries push forward with rapid electrification and record-breaking renewable energy development, a new structural necessity is emerging in the energy system: ...

However, the energy transition is entering a new phase due to the penetration of renewables, price volatility and the increased need for ...
