What is the Porto project?

The Porto project, Eco Wave Power's first MW-scale wave energy venture in Portugal which is expected to be finalized during 2026, aims to harness ocean wave energy to generate sustainable electricity.

Can storage replace thermal generation in Portugal?

The pursuit of economic viability by storage facility owners will inherently lead to charging during low-cost hours and discharging during hours that are more economically attractive. Storage can replace thermal generation in constraint markets, easing the grid and supporting Portugal's 2040 phase-out target.

What role does Portugal play in offshore wind generation?

According to the IEA Portugal Energy Policy Review, the government sees a role for Portugal to play in offshore wind generation and has approved six sites for floating offshore wind deployment.

Why is Portugal focusing on electricity & natural gas interconnection?

There is a strong focus on electricity and natural gas interconnection to unlock the potential of Portugal's solar and wind resources and liquefied natural gas capacity to support local economic development and European energy security.

Compressed air energy storage (CAES) is a large-scale energy storage system with long-term capacity for utility applications. This study evaluates the economic feasibility of CAES pre ...

Nestled in the rugged hills of northern Portugal, the Porto Novo Pumped Storage Power Station stands as a marvel of modern energy engineering. Located near the Douro ...

The future of Portugal's power grid lies not only in generating more clean energy but in managing it intelligently. Storage is both the brain and the muscle of this new grid.

Originally focused solely on building solar capacity, the company is now allocating an additional EUR150 million to incorporate 100 MW of battery storage systems alongside its nine ...

Storage can replace thermal generation in constraint markets, easing the grid and supporting Portugal's 2040 phase-out target. Storage facilities can effectively deliver essential voltage and ...

The Porto Novo Air Energy Storage Project in Portugal has become a blueprint for solving renewable

energy's Achilles heel - intermittent power supply. By storing excess wind and ...

Portugal is a leader particularly in wind generation and is driving the rapid deployment of photovoltaic solar energy and battery storage. In efforts to increase renewable ...

By storing excess wind and solar energy as compressed air in underground salt caverns, this system can power 200,000 homes for 8 hours during peak demand. Think of it as a giant ...
