It is crucial to integrate energy storage devices within wind power and photovoltaic (PV) stations to effectively manage the impact of large-scale renewable energy generation on power ...

The plant is expected to produce about 100,000 MWh of green electricity per year. The 100 MW solar facility will be constructed on ...

The plant is expected to produce about 100,000 MWh of green electricity per year. The 100 MW solar facility will be constructed on a 177.2-hectare site in Spilve Meadows, on ...

Managed by Utilitas, Latvia's largest wind energy producer, this project combines wind energy generation with advanced storage capabilities, setting a new standard for renewable energy ...

As we approach Q4 2025, Riga's storage capacity is projected to triple, potentially eliminating the need for one natural gas peaker plant entirely. Now that's what we call powering progress!

This deal marks the beginning of a major solar energy project at the port of Riga, which will include the installation of solar panels, the production and storage of renewable ...
