How many schools currently use solar energy?

Nearly 5,500 schools currently use solar energy systems. This number will continue to grow rapidly as solar panel efficiencies improve and manufacturing costs decline.

What happens when a school uses a solar system?

When a school uses a solar system, the building continues to use electricity from the utility when its power demands exceed the solar system's production. At the end of the billing cycle, the school's electric bill reflects the total energy consumed minus the electricity that was produced by the solar system.

What can a school do with a utility-grade installation?

A utility-grade solar installation can be integrated into a school's STEAM programs. This means it can be used as a learning tool for students and teachers, with various resources available like the National Energy Education Development (NEED) project.

How do I select a solar system for my school?

To choose the right solar system for your school, consider the following factors: energy usage trends, electricity consumption, and a thorough understanding of the facilities. The solar system chosen should meet the financial and energy needs of the school, both current and future.

The solar system chosen must meet the school's current and future financial and energy needs. From an owner's perspective, the timeline below walks through the seven basic ...

Up to half the cost of a clean energy project at your school could be refunded to the district under the federal Inflation Reduction Act. Tax-exempt entities such as public schools can receive ...

These federal programs may provide financial assistance to lower energy costs and may be applied to solar.

In other words, schools can now receive a direct payment from the federal government for a portion of the cost of installing solar ...

In other words, schools can now receive a direct payment from the federal government for a portion of the cost of installing solar energy systems, allowing them to offset ...

Finally, when requesting solar feasibility and cost assessments, school districts should ask to see an analysis

that includes both cash payment and PPA options.

For public schools, this legislation presents a rare and time-sensitive opportunity to still receive direct payments (think cash) for investing in solar and geothermal energy systems.

With this report, we hope to equip district-level stakeholders--staff, school board members, community advocates--with the tools they need to make informed decisions when going solar, ...
