Photovoltaics is picking up speed in Central and Eastern Europe. Poland is leading the way, but other markets such as Bulgaria, Romania and the Czech Republic are also ...

Solar power generation is increasing more rapidly in Central and Eastern Europe than in any other region on the continent, outpacing the growth seen in wealthier and sunnier ...

At least six Eastern European nations will generate over 20% of their total monthly utility-supplied electricity from solar farms this summer, when regional solar radiation levels hit ...

Hungary has joined the list after adding 1.6 gigawatts (GW) of PV capacity in 2023, a 45 percent increase over the previous year. This was the country's most successful solar ...

Solar thermal technologies can be deployed in most European regions and are a particularly good option in Europe's eastern and south-eastern countries, where solar thermal heat is often the ...

Solar farms will provide electricity to at least six Eastern European countries, with a combined total of over 20% of the monthly power they use this summer. This is when solar ...

Solar thermal technologies can be deployed in most European regions and are a particularly good option in Europe's eastern and south-eastern ...

Across Europe, there was an east-west contrast in the potential for solar PV power generation, with above-average potential in eastern Europe and much below-average potential in western ...
