Can solar energy be used in Sudan?

Research and projects on solar energy in Sudan have primarily concentrated on solar PV systems, with relatively limited focus on solar thermal energy. Nevertheless, there are some studies that have explored power generation using CSP technologies.

What is the energy supply in Sudan?

The energy supply in Sudan is primarily derived from crude oil, hydroelectricity, biomass, and renewable energy sources such as wind, solar, and geothermal energy. As illustrated in Figure 2a, biomass is the largest contributor, accounting for 52% of Sudan's total energy consumption.

How many geothermal projects are planned in Sudan?

However, 54 MW of geothermal projects are planned by 2030. Additionally, Sudan's nuclear energy program targets two 600-MW reactors by 2030, while tidal energy projects could contribute 1.2 TWh annually to the grid. These initiatives aim to diversify Sudan's energy mix and enhance the country's sustainability.

Does Sudan have a wind energy project?

Therefore, the government of Sudan has proposed several wind energy projects, including a 180 MW wind farm in the Red Sea region and a 20 MW wind farm in Nyala.

e resource potential Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart ...

It argues that Sudan has great potential to secure a sustainable energy supply by switching to solar, wind, and geothermal resources. The central assumption is that Sudan's ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Sudan's energy transition requires smart storage solutions that address technical challenges while supporting sustainable development goals. From grid-scale installations to community ...

In the wake of prolonged conflict, Sudan faces a critical juncture in its energy sector. The country's renewable

energy potential ...

One example of this is government's plans for the building of a 100 MW solar panel farm in the city of Dongola and a 50 MW wind farm in the Red Sea state, according to ...

By filling critical gaps in power and digital connectivity, the project supports urgent needs, while laying the foundation for long-term recovery and growth.

Hence, funds currently allocated to importing and distributing fossil fuels -- or invested in expanding thermal energy generation -- ...
