What is a battery energy storage system (BESS)?

The solution lies in alternative energy sources like battery energy storage systems (BESS). Battery energy storage is an evolving market, continually adapting and innovating in response to a changing energy landscape and technological advancements.

How big is battery storage in California?

Growth and Maturation of Battery Storage in California Over the past several years, the deployment of battery storage systems has grown significantly throughout California, growing from 500 megawatts (MW) in 2019 to over 13,300 MW statewide in 2024. Likewise, battery storage system technologies and standards have also matured over time.

What is a battery energy storage system (BESS) & an uninterruptible power supply (UPS)?

What are battery storage systems?

Battery storage systems are one of the key technologies California relies on to enhance reliability and reduce dependency on polluting fossil fuel plants. Battery storage systems soak up clean energy in the daytime when the sun is shining, store that electricity, and then export it to the grid in the evening hours when the sun is down.
