For the first time ever, CEMEX and Synhelion successfully connected the clinker production process with the Synhelion solar ...

This project aims to study conditions to maximize heat transfer to the raw cement mix, further advancing the cause of solar-powered cement ...

Synhelion and Cemex announced today a significant milestone in their joint effort to develop fully solar-driven cement production: the ...

In the CemSol research project, a team of scientists is developing and demonstrating a solar-heated calcination plant to produce ...

In the present work, the authors have attempted to design a solar cement plant for supplying solar energy to the cement industry. A case study was done, which investigated a ...

This review provides a comparative assessment of how calcium-looping technology has been applied in fossil-based power plants and cement plants for CO₂ capture versus in ...

This project aims to study conditions to maximize heat transfer to the raw cement mix, further advancing the cause of solar-powered cement production. The engineering industry and the ...

Solar power generation installed on cement facilities isn't just environmentally responsible - it's becoming the ultimate competitive advantage in a decarbonizing world.
