Will Hungarian energy storage projects get subsidy support?

The Hungarian Ministry of Energy has announced that around 50 grid-scale energy storage projects with a cumulative capacity of 440 MW have received subsidy support through a tender launched in February this year.

Where will Hungary's largest energy storage system be built?

With funds obtained through a previous program, transmission system operator MAVIR is already building the country's largest energy storage system - a 20 MW project in Szolnok, central Hungary, the ministry said. It added that several projects with even bigger capacity will be installed under the tender concluded a few days ago.

How do energy storage subsidies work?

The subsidies are secured via the National Recovery and Resilience Plan and the state budget. They consist of non-refundable investment support and income compensation for the construction of energy storage facilities and their operation for at least ten years. The operational support will be provided through two-way contracts for difference.

This phenomenon is by no means unique to Hungary. In the EU member states, there were almost 10,000 hours with negative prices in 2024. To manage the challenges of ...

Hungary has officially announced a large-scale residential battery energy storage subsidy program, signaling a major acceleration of energy storage deployment across Central ...

Summary: This article explores how user-side energy storage projects in Pécs, Hungary, are transforming energy management for industries and households. Discover cost-saving ...
