-----

Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which is over even longer periods of time emitted through the Sun's outer layer, the photosphere. This ...

A solar system begins to form when a small patch within a nebula (small by the standards of the universe, that is) begins to collapse upon itself. Exactly how this starts isn't clear, although it ...

Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

Harnessing solar energy involves more than simply placing panels on a roof; it requires a carefully selected suite of hardware components working together to safely convert ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own ...

At the center of the Solar System is the Sun, a massive star that provides light and heat to the planets that orbit around it. In addition to the Sun and the planets, the Solar ...

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus its planets, moons, and asteroids.

The solar system has one star, eight planets, five dwarf planets, at least 290 moons, more than 1.3 million asteroids, and about 3,900 comets.
