The aim of this article is to establish a methodology for achieving a wind transfer function for local applications. For this purpose, we analyzed and compared data from a field ...

In order to realize the fast simulation and grid-connected transient research of wind farm, this paper presents a simplified equivalent model of wind farm based on equivalent ...

The aim of this article is to establish a methodology for achieving a wind transfer function for local applications. For this purpose, ...

It was shown how the phase-lead transfer function relating torque and power is influenced by wind speed and angular velocity of the rotor. The VSC connected to the generator is operated in ...

In order to investigate the overall output of the system quickly, a performance matching method of wind rotor and generator based on energy transfer is proposed in this paper.

In this paper, an effort is made to derive a complete transfer function of a variable-speed wind turbine generator (WTG) system. This ...

In this paper, a transfer function based equivalent model is proposed to represent the dynamics of the WF under the power grid fault and wind speed variation. The coherence of ...

This paper presents a new Transfer Function (TF)-based approach to evaluate the summation of complex harmonic and interharmonic current primary emissions in a wind power ...
