Researchers have focused on improving energy efficiency, optimizing solar panel designs, and developing innovative charging mechanisms. Additionally, emerging trends have ...

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi ...

Researchers have focused on improving energy efficiency, optimizing solar panel designs, and developing ...

Here, we focus on discussing the existing UAV energy harvesting methods from the perspective of solar and mechanical energy. Based on these energy sources, we also discuss ...

These innovations aim to improve energy efficiency, reduce size, and increase the payload capacity of drones, making them more viable for long-endurance missions.

This paper details our investigation of a battery-free fixed-wing UAV, built from cost-effective off-the-shelf components, that takes ...

The final objective was to design and analyze a solar powered unmanned aerial vehicle for long endurance applications with implementation of batteries and solar cells.

Researchers from Spain and Ecuador have developed an optimization method to integrate PV cells and batteries into UAVs. They presented their findings in " Optimization of ...
